**Abstract:** Logistics is considered to be the backbone of the economy, providing efficient, cost effective flow of goods on which other commercial sectors depend. The logistics industry in India is evolving rapidly and the key indicators show the future trend of the sector positively. Several factors impacted the growth of the logistics industry in India like – tax structure, growth across major industry segments such as automobile, retail, engineering, pharmaceuticals, food processing and e-commerce. Despite weak economic sentiments, the logistics & warehousing industry continued to witness growth. The Indian Logistics sector has grown at a CAGR of around 16% over past five years and is expected to grow at around 15-20% for the current period. Several global players view Indian logistics market favorably.

**Keywords:** Financial performance, Logistics Industry, profitability

**Introduction:** Logistics Industry is considered as an enabler of economic development of our country. India's Logistics sector is poised for an accelerated growth. Empirical evidence shows that Indian Logistics Sector is growing at 1.5 to 2 times the GDP growth. Logistics spend in Indian is around 13% which is one of the highest in the world. Many key logistic players are performing well. Finance is a very significant facet of a business. The financial requirements of a business must be sufficient enough to meet its long-term as well as short-term commitments. To meet long-term and short term commitments, business needs permanent capital and working capital. Effective utilization of available financial resources is necessary in order to avoid financial distress. Evaluation of several financial indicators derived from financial statements will help the business to avoid bankruptcy.

### **Review of the Literature:**

**Altman I. Edward (1968)** introduced the multiple discriminate analysis technique using five financial ratios. A Z score model was developed in order to find a financial health and bankruptcy prediction model based on 66 manufacturing companies.

**Jonah Aiyabei (2002)** discussed the theoretical aspect of financially distressed companies which are based on a cyclical concept and examined the financial performance of small business firms based in Kenya using Z score model.

**Kannadhasan (2007)** studied about the financial health of a company in India. Using Z score model, the performance of a company was evaluated and concluded that overall financial health of a company is good.

**Kivuvo, Olweny (2014)** conducted financial performance analysis of Kenya's SACCO sector. The data covered eight years from 2008 to 2013. Based on the analysis using Z score, companies are segregated into satisfactory, very satisfactory and not satisfactory.
