ABSTRACT

The aim of this research is analyze the factors affecting students in Isfahan city's penmanship. The study included 300 elementary school teachers have participated in Isfahan city which is proportional stratified random sampling according to the selected job. The research method is a descriptive survey. In this study, the researcher constructed a 100-item questionnaire was used after the exploratory factor analysis was reduced to 74 questions. This questionnaire has construct validity and reliability of the method, Cronbach's alpha coefficient obtained 0/89. The one-sample t-test and by, t for two independent samples (F) analysis of variance and LSD test was used consequential damages. The results showed that family support more than average influence on calligraphy. These results are statistically significant at the level of $\alpha = 0/05$ were significant.

Keywords: penmanship, educational methods and family support

Introduction

There are severe problems in writing the words correctly is of grave concern to parents and teachers. The crucial role of education in society and it is constructive Major investments and high costs that the community will spend this collection. All are considered indicative of the importance of the education system in general and teaching process in particular among the problems facing our education system. Learning disorders, dyslexia linear programming and bad students. Human principally when it occurred to him that leave a lasting impression and deep exchange with each other to do the writing began to take shape that Thus we see that throughout history the attention of the authorities are gradually writing. Most experts consider writing a major role and are learning to read and spell (Naderi, Faraghi, 1369). Of calligraphy, twin and with the history and culture of our country has maintained its role as the linchpin of Iran's religious and cultural identity and dignity is undeniable. Welcome to our on-line world is a virtuous individual naturally and without any ceremony, praised and encouraged the people of culture and art to the cause of every good writer and a good journalist. Learning lines are lines like hieroglyphics, broken caligraphy, writing, third and versions that have been imbued with the spirit and nature of our society a subtle spiritual and cultural education that can be a positive influence in the education of students at the public. With the evolution and emergence of the alphabet until the advent of Islam, the term calligraphy art there. From the late second century AD, calligraphy and fine art prints line was considered. Calligraphy in term of the writing lines on principles and good practices beautiful. What is a good book to fit the viewer brings the lovely lines.

Calligraphy is one of the manifestations of Islamic Art. Arabic calligraphy has played a key role in the art of calligraphy. In fact, the evolution and diversity of the Arabic script Art of Calligraphy with meaning.

Calligraphy is the importance of culture and Islamic civilization in writing calligraphy word of God has found its true meaning. That is why the Holy Quran is the largest use of calligraphy writing. Only confirmed calligraphy art of Islam and the Islamic world was considered an essential part of the culture. The creative forces in the art of calligraphy was used.

Before the advent of Islam in the language of the ancient and medieval Persia. After the advent of Islam in Iran was suddenly transformed into a wonderful Arabic script was introduced.

Iranian Arabic script in their writings. They also tried to develop it. Three suspended, and broken caligraphy Islamic caligraphy manifested in the line, the line of Iran

According to the artistry and innovation in Muslim artists, in addition to effective use in writing the Arabic script Quran also went the other arts. This line of fine arts as well as other factors in the decoration of pottery, metal, plaster, and the cloth.

calligraphy is one of the traditional arts our country that has long been regarded as the ancestors. The symptoms of a contract in the form of letters of the alphabet are used for conveying information and ideas between people. When a man feels for beauty and art of beautiful writing line interference and the criteria to be mixed with it comes the art of calligraphy. Since everything (inevitably arise from the heart sits) to the heart of the beautiful and charming sits down by the impact it has on the reader several times attention to calligraphy and expand it in the past because the scribe Quran and Hadith books were.

The verses in the Quran pen-based self-learning credit line made up of Muslims as divine and spiritual phenomenon considered and a special tribute to the artist calligraphy as well as certain rules set by the skill and refinement, the core of which is leaving sins Calligraphy in the registration and publication of scientific and cultural developments in the field of applied arts and the art has been widely

exploited. In the present era, with the increasing advances in the printing industry emerged and how often massive new technologies in this field are offered line still retains its rightful place (Rashvand, 1387)

Considering to what was said, referring to some of our internal and external investigations

---Khusrau-jawed, Ghavami Lahij, 1391) in this study as the study of factors affecting students' writing skills, legible .

Del Khani, 1390) in this study as linear ill students and professors of the view and the view of master calligraphy Roohollah Dalkhan factors have been identified -comfortable, 1390) In this study, a bad line in the third grade and identify factors and causes of ill-linear and has to fix it

Atashi, 1387) In this study, students agents based on environmental factors, family, physically examined

External investigations

-Jenny and John (2012) Jenny and John showed that there is a significant relationship between the speed of writing for children and their writing is beautiful. The study on 252 children aged 8 to 14 years. Data analysis showed beautifully legible writing and writing in children who were the correct item, compared to children who did not have much significance was found. However, children who wrote bad line faster than your friend wrote. These findings emphasize the "correct pencil grip" was performed and showed a good linearity to other factors such as family, friends, coaches important to pay more attention to the line at this age.

-Miller et al (2012) in a study that was conducted by Miller et al, 66 children aged 7 to 12 years old with mild motor problems were studied. Number of children referred to the elimination of writing disorders, difficulty with handwriting. They are illegible handwriting, the soul also had low self-esteem. The purpose of this study was to identify patterns of children's handwriting with mild mobility

problems and to examine the relationship between perceptual-motor abilities were handwriting and error patterns. The results showed three factors were writing: a) muscle weakness in fingers, b) lack of eye distance and the writing and c) non-compliance visual and sensory-motor muscles. The cause of non-compliance with the senses of sight and motor skills were confirmed. Acceptable reasons for the relationship between perceptual strengths - physical, mental thoughts there.

-Marshall, J., et al (2011) J. Marshall and colleagues investigated the relationship between gender and calligraphers writing in childhood, a group of 60 subjects (30 males and 30 females) to 5- 6/5 years in a kindergarten studied. They have a 26 model has 8 uppercase letter that they were copied. The results showed that in the second half of the academic year, after providing the necessary training, the girls are better than boys practice their writing legible.

-Smith Terry Holland (2012) to study the effect of handwriting coteaching Smith Terry Holland for the second pre-test and post-test design and to increase the speed of handwriting legibility dominate the writing of the students with the diverse learning needs.

The research question under considered is

The extent to which the student is effective family support penmanship?

Research method, society ,sample

Selection depends on the objectives, the nature of the research and administrative facilities. The purpose of this research is that the researcher would choose what method can be more accurate and logical manner and to obtain answers to the research questions, This study investigates the one hand and on the other to become more active line educational practice penmanship and solutions will provide considering that the aim of this study was to analyze the factors affecting penmanship teacher elementary school students from the perspective of the city is the 93-92 school year.

In this study, non-experimental descriptive survey of the method is used. In this method, the researcher directly to participants without interference or manipulation of the variables studied the situation for what it is. Educational and Behavioral Sciences at least one common trait of all those who have achieved their intended results are applied to. The population of the city of all primary teachers in the 93-92 school year, which is studying in the 6th district. Of the population, according to exploratory factor analysis of 300 randomly selected stratified.

Measuring Tools

In this study, in order to collect the data and information required by the questionnaire was used for data collection. This is a self-made questionnaire.

Analysis

One of the main stages of research, providing results, and how it is that its close association with statistical measures to describe and analyze the data collected here. Use of statistics in research is inevitable. The statistics on the level of "statistical" and "inferential" In descriptive statistics were used to describe quantitative characteristics of the groups studied Tremblay. Presentation and explanation of descriptive statistics and indicators, the first step in the analysis of data obtained from research. These statistics include a large amount, the central sizes (average value of the index), size-distribution, correlation indices and the corresponding graphs. In the pres. study, in addition to descriptive statistics, inferential results in order to extract the one-sample t-test, t for two independent samples (F) analysis of variance and LSD test were used consequential damages.

What extent the student is effective family support penmanship?

P	Tob	μ_0	dF	S	\bar{x}	n	Indicators Variable
0/000	15/3	3	229	0/29	3/26	300	Family support

As can be seen in Table 1 t value obtained by means of family support in the diagnosis of $\alpha=0/01$ assumption (3) is larger than the critical value table with 299 degrees of freedom. Therefore, the null hypothesis is rejected and the research hypothesis is confirmed. The t-test showed that the mean scores above average on the family support calligraphy effects. Therefore, it can be obtained with 99% of the population likely to be generalized.

results

According to Table 1, t value obtained by means of family support in the diagnosis of $\alpha=0/01$ assumption (3) is larger than the critical value table with 299 degrees of freedom. Therefore, the null hypothesis is rejected and the research hypothesis is confirmed. Neglect of parents to the children and how to write them or the wrong role models and their parents who are the bad areas for linear ill children and provides. Linear bad parents, bad example for children because the calligraphic skill that must be learned if the child lives in a family whose members have children of talents more and more field Good writing.
