## CONTENTS

Sr. No.	TITLE & NAME OF THE AUTHOR (S)	Page No.
<u>1</u>	<b>Empirical and Qualitative Studies by Analyzing Requirement Issues In Global Software Development (GSD).</b> Rabia Sultana, Fahad Jan, Ahmad Mateen and Ahmad Adnan	<u>1-18</u>
<u>2</u>	<b>Challenges and Opportunities of Technology Transfer Management.</b> Armin Mahmoudi	<u>19-34</u>
<u>3</u>	<b>SMEs Competitive Advantage through Supply Chain Management Practices.</b> Prof. Gyaneshwar Singh Kushwaha	<u>35-50</u>
<u>4</u>	<b>Different Issue for Handling Different Cache Strategies on Usenet.</b> Harish Rohil and Jitender Yadav	<u>51-71</u>
<u>5</u>	<b>Power Quality enhancement in MICROGRID (Islanding Mode) by Using ND - MLI DSTATCOM.</b> M. Manigandan, MIEEE and Dr. B. Basavaraja, SMIEEE	<u>72-90</u>
<u>6</u>	<b>Analysis of Optical Soliton Propagation in Birefringent Fibers.</b> R. Samba Siva Nayak, Suman. J and Naveen	<u>91-102</u>
<u>7</u>	<b>Human Resource Accounting in IT industry (A study with reference to Infosys Technologies Limited).</b> Dr. P. Natarajan and Bashar Nawaz	<u>103-123</u>
<u>8</u>	<b>Solving profit based unit commitment problem using single unit dynamic programming.</b> P.V. Rama Krishna and Dr. Sukhdeo sao	<u>124-146</u>
<u>9</u>	<b>Achieving Optimal DoS Resistant P2P Topologies for Live Multimedia Streaming using Cost function Algorithm.</b> A. L.Srinivasulu, S. Jaya Bhaskar, Ms. K. Deepthi and Dr. Sudarson Jena	<u>147-162</u>
<u>10</u>	<b>Quality of Web Sites – A Study On Some Standard Indian Universities.</b> K. V. N. Prasad and Dr. A. A. Chari	<u>163-182</u>
<u>11</u>	<b>Simulating Complex Environmental Phenomena Using Cubemap Mapping Technique.</b> Movva. N.V. Kiran Babu, Ch. Siva Rama Krishna, M. Hanumantha Rao and V. Venu Gopal	<u>183-203</u>
<u>12</u>	<b>Data Sharing and Querying in Peer-to-Peer Data management System.</b> Jyoti Duhan	<u>204-223</u>
<u>13</u>	<b>Secure File Transmission Scheme Based on Hybrid Encryption Technique.</b> Gaurav Shrivastava	<u>224-238</u>
<u>14</u>	<b>Investigating Flip-Flop Gates Using Interactive Technology.</b> Mr. Amish Patel, Ms. Neha P. Chinagi and Mr. Hiren R.Raotole	<u>239-255</u>
<u>15</u>	<b>B2B Versus B2C Direct Selling.</b> Ankit Chadha and Er. Banita Chadha	<u>256-270</u>
<u>16</u>	<b>Application And Implementation of Crm In Hotels of Developing Cities - A Case Study of Ranchi.</b> Praveen Srivastava, Abhinav Kumar Shandilya and Shelly Srivastava	<u>271-294</u>
<u>17</u>	<b>An Automatic Bacterial Colony Counter.</b> Ms. Hemlata, Mr. Ashish Oberoi and Mr. Sumit Kaushik	<u>295-309</u>

## **Chief Patron**

**Dr. JOSE G. VARGAS-HERNANDEZ**

Member of the National System of Researchers, Mexico

Research professor at University Center of Economic and Managerial Sciences,  
University of Guadalajara  
Director of Mass Media at Ayuntamiento de Cd. Guzman  
Ex. director of Centro de Capacitacion y Adiestramiento

## **Patron**

**Dr. Mohammad Reza Noruzi**

PhD: Public Administration, Public Sector Policy Making Management,  
Tarbiat Modarres University, Tehran, Iran  
Faculty of Economics and Management, Tarbiat Modarres University, Tehran, Iran  
Young Researchers' Club Member, Islamic Azad University, Bonab, Iran

## **Chief Advisors**

**Dr. NAGENDRA. S.**

Senior Asst. Professor,  
Department of MBA, Mangalore Institute of Technology and Engineering, Moodabidri

**Dr. SUNIL KUMAR MISHRA**

Associate Professor,  
Dronacharya College of Engineering, Gurgaon, INDIA

*Kurnool*

**Abstract:**

The main objective of this study is to investigate the websites of some standard Indian universities and their accessibility and utility to various users. Thus the main investigation is to analyze various characteristics connected with these websites to assess the quality. To begin with, it is attempted to investigate various faults occurring in the websites of 30 universities. The aim is to focus on these **faults (major or minor)** and to suggest corrections. The study has in depth analysis and categorizing the vital few major and minor faults which contribute to the confusion and wasting of precious time of users. The study is based on “**Pareto principle** “. The modules of the university web sites studied are various departments, courses offered, admission, administration, libraries, faculties etc.

**KEYWORDS:** Indian Universities, Pareto principle, Service quality, Websites.

**INTRODUCTION:**

WEB is a computer programming system created by Donald Knuth as the first implementation of which is called a "literate programming": the idea that one could create software has works of literature, by embedding source code inside descriptive test. In the present days the internet has quietly become the body of the business world with Web Applications as brain. The quality attributes of Web Application include reliability, availability, interoperability and security. The growth of internet users was multiplied year by year since 1990s.

Web consists of two primary programs:

- (1) TANGLE which produce compliable code from source text.
- (2) WEAVE of which produces nicely formatted printable documentation.

**Definition of web site:**

A web site is a collection of web pages containing text, images, audio and videos. The complete structure of the internet is made up of websites a mode of sharing information on the

internet. Web sites are designed and developed for a wide variety of organizations in areas such as education, business, research, web banking, stock exchange on the web, web games.

**Introduction to Web Applications:** Web Applications are software programs that operate on internet, interacting with user through Web Browser. The organization of Web Application is divided into three tiers. They are Web Browser, Web Server and Database Server. The information in the application is processed tier by tier. The user interacts through Web Browser, programming logic is performed in Web Server and database operations are completed in Database Server. Hence Web Application model is known as Three-Tier application architecture. All these tiers are communicated through HTTP protocol.

**Web Browser:** The Web Browser is capable of retrieving requested hypertext documents from the Web Server via HTTP protocol. The browser also embeds a Java Virtual Machine and JavaScript interpreter to execute the Java Applets or JavaScript's specified in the documents. Additional information processors such as Active X Controls are also embedded in the browser to extend its functionality.

**Web Server:** The contents of Web Applications (HTML documents, image files or program) are stored in Web Server. An HTTP protocol is placed at the Web Server to accept HTTP requests from the browsers. According to the Web Server's configuration, it may forward a request to

- i. The document retriever serving stored HTML documents, Java Applets or multimedia files
- ii. The other information processors on the Web Server such as CGI programs for dynamically generated HTML documents and contents.

**Database server:** Database access interfaces such as ODBC (Open Database

Connectivity) and JDBC (Java Database Connectivity) are used to connect Web applications with database servers. The communication between Web Application components may also flow through plain TCP sockets, Java RMI (Remote Method Invocation) or CORBA (Common Object Request Broker Architecture).

### **Methodology:**

The World Wide Web consortium (W3C) a non profitable organization developed for setting or evolving the web standards under the chairmanship of inventor of web Sir Tim Berners-Lee. Thus the web application needs to oblige certain standard for the utility of the users. Therefore in this study a pilot survey of some universities web sites were considered to evolve quality norms of the web sites for the better accessibility criteria. Basically in this study it is motivated to consider few university web sites for verification and assurance of the quality in order to see the utility and accessibility of them to the end users. In this connection 30 web sites of the universities are investigated during October and December 2007. These university webs accessibility was evolved using world wide web consortium (W3C) guide lines and found the information such as faults in web pages which are categories as minor and major, the average down time per page of the web site etc. The data was collected on the 30 universities and tabulated and seen in table 1

The World Wide Web (W3C) defines a set of guidelines for quality web design. Some of the important guidelines are as follows.

- Provide a text equivalent for every non-text element
- Do not rely on color schemes only.
- Use mark up and style sheets instead of images to convey information.
- Clearly mention the text information of web page with natural language.
- Use tables properly in the web document.
- Ensure that web pages featuring new technologies transform gracefully.
- Ensure user control of time sensitive content changes.
- Ensure direct accessibility of embedded user interface.
- Design of device—independence.
- Provide context orientation information.
- Provide clear navigation mechanisms.
- Ensure that documents are clear and simple.

**DATA & ANALYSIS:**

During the investigation of web application the following characteristics are collected

- a. No. Of pages of website
- b. Total size of web sites ( kbs )
- c. Total down time (sec per kbs)
- d. Total no. Of faults (minor and major)
- e. No. Of broken links
- f. Average no. of faults per web page
- g. Average size in each web page (kbs)
- h. Average down time per page

**Table.1: Detailed information of web sites using W3C guide lines on some important characteristics.**

S.No	University name	web site	(a)	(b)	(c)	(d)	(e)	(f)	(g)	(h)

### Pareto analysis – A detailed study on various faults occurring in some Universities web sites:

Utilizing the data collected and seen in the table.1, Pareto analysis is carried and evolved the **vital few major and minor** and also **trivial many major and minor** design faults that are occurring in web pages reason wise & University wise respectively and tabulated and seen in tables 2 to 7.

**Table .2: Minor web design faults reason wise in various web sites of 30 universities**

Fig.6 .Major faults in Web sites – University wise:

### **Conclusion and observations:**

This study concerned with observing and analyzing the occurrence of different web design faults reason wise in the pages of University web sites using standard web tools W3C and Pareto principle.

- (1) It is observed that 11 minor faults and 7 major faults are occurring in the various university web sites.

(2) Among these faults it is further found from Pareto principle that **4 minor faults** namely

- Table Tag
- Image
- Body Tag
- Font Tag

are found to be the **vital** and occurring with high intensity say 70% among the total faults. Thus these are the reasons vital few to contribute majority of the faults. Further the other 7 minor reasons are occurring with just 30% of the total faults are hence treated to be **trivial many**. Thus the 4 minor faults which are indicated above are vital reasons few to be attend to do away with them. The web designer in general is suggested to consider necessary remedial action in order to reduce them to a minimal level. Of course, this would improve considerably the web sites, so that they become more versatile and accessible to the satisfaction of the users with lowest quality of down time.

(3) Similarly it is found that **three major** faults namely

- Document Applet
- Image Load
- Title Tag

Committed predominantly by the web designers, which appear almost with 60% intensity. Therefore it is felt that these **three major faults** are treated to be vitals need much attention to review the design these web sites. This can improve the utility and accessibility of these web sites in a way the down time per page may significantly get improved.

(4) Also the study analyses the occurrence of faults in web sites universities wise. Thus it is observed that approximately 50% of total Universities considered for the study have accounted 70% of major and minor faults. The list of such universities is seen in S.NO 1 to 16 of table 6 & 7.

(5) The Universities sited in the list are those, which are contributing more no. of **minor and major faults**. Therefore it is suggested that these Universities shall make note of the fact and review the respective web sites in order to remove the so called major and minor faults occurring in these sites. This would bring check their University web sites to be better utility and accessibility to the users.
